Abstract— The invention of the mobile phone was a long time ago and it has gone through many stages and developments to become as it is now in our hands. It has become a tool to manage all business works. Now we are talking about the fourth generation of mobile phones, the smart mobile phone that has the Internet access of data. These devices, such as laptops, tablets, and small computers, have the ability to access data anytime and anywhere. This research aims to study the development and the effectiveness of electronic management by using mobile devices to achieve the objectives in the best way. The objectives of sustainable development are programmed and achieved in 2030. This research concentrated on the use of mobile devices by subscribers and how to achieve both benefits for electronic management. The number of mobile phone subscribers increased at last two years to reach about 8.5 Billions subscribers. In Iraq, the number of mobile phone subscribers reach its population to be about 37 Millions. The integration of mobile devices with big data with ICT technologies has led to positive and effective results. Mobile, now a leader in technology, has evolved significantly to manage business operations significantly on all areas of business, including management.
