Abstract	i
Contents	iii
Tables	viii
Figures	x
Abbreviations and Symbols	xiv
Chapter 1: Introduction	
1.1 Overview	1
1.2 Friction Stir Welding	3
1.2.1 Friction Stir Welding Zones	5
1.2.2 Tool Material and Geometry	6
1.2.3 Advantages and Disadvantages	8
1.2.3.1 Advantages of FSW	8
1.2.3.2 Disadvantage of FSW	9
1.2.3.3 Limitation of FSW	10
1.2.4 Friction Stir Welding of Aluminum Alloys	11
1.2.5 Material That Used in This Study	12
1.2.6 Welding Procedure	12
1.2.7 Application of Friction Stir Welding	14
1.2.6 Defection of Friction Stir Welding	15
1.2.7 Friction Stir Welding Variables	16
1.3 Fatigue	17
1.3.1 Endurance Fatigue Curves	17

	1.3.2 Relation Between Endurance Limit and Ultimate Stress	18
	1.3.3 Fatigue of Friction Stir Welding	19
	1.4 Thesis Objectives	19
Chapter two : Literature Review		
	2.1 Introduction	20
	2.2 Friction Stir Welding (FSW) of Aluminum Alloy	20
	2.3 Temperature Distribution and Residual Stresses in FSW	25
	2.4 Fatigue in Friction Stir Welding	28
	2.5 Optimization of Welding Parameters	38
	2.6 Summary of Literature Review	40
	2.6.1 Summary of Friction Stir Welding (FSW)	40
	2.6.2 Summary of Friction Stir Processing (FSP)	40
Chapter 3: Numerical Simulation		
	3.1 Introduction	41
	3.2 Minitab Program	41
	3.2.1 Determining the Welding Parameters and Their Levels	41
	3.2.2 Signals to Noise Ratio (S/N)	42
	3.2.3 Analysis of Variance	43
	3.3 Numerical Procedure (ANSYS Program)	45
	3.3.1 Define Element Types	45
	3.3.2 Engineering Data	46

	3.3.3 Geometry	47
	3.4.4 Mesh Generation	47
	3.4.5 Boundary Condition	49
	3.3.6 Fatigue Solution	50
Chapter 4: Experimental Work		
	4.1 Introduction	53
	4.2 Material Selection	54
	4.3 Welding Tool	55
	4.4 Fixture Tool	58
	4.5 Plates Before Welding	59
	4.6 The Welding Operation	60
	4.7 The Parameter used in Welding Operation	61
	4.8 The Specimens after Welding	63
	4.19 Tensile Test	66
	4.10 Fatigue Test	67
	4.11 X-RAY Diffraction Test	68
	4.12 Grinding and Polishing	69
	4.13 Hardness Test	70
Chapter 5: Results and Discussion		
	5.1 Introduction	71
	5.2 Tensile Test Results	71
	5.2.1 Case One: Base material	71
	5.2.2 Case Two: Tensile Results for OWL 90°	72

	5.2.3 Case Three: Tensile Results for OWL 60° With the Applied Load	76
	5.2.4 Case Four: Tensile Test Results OWL 45° With the Applied Load	79
	5.2.5 Comparison Between Different Orientation Welding Lines	82
5.3 Minitab Results		83
	5.3.1 S/N Results	83
	5.3.2 ANOVA Analysis	85
5.4 Case Five Tensile Test Results For Double Passes		86
5.5 Hardness Test Results		86
5.6 X-Ray Results		88
5.7 Fatigue Test Results (Experimental)		90
	5.7.1 Case one (BM)	90
	5.7.2 Case Two (FSW)	92
	5.7.3 Case Three (FSP)	94
	5.7.4 Endurance limit and Fatigue Curve (Experimental)	96
5.8 Fatigue Numerical Results		97
	A. Base Material	97
	B. Single Pass (Optimum Case)	99
	C. Double passes (FSP)	100
	D. Endurance limit and Fatigue Curve Equation	101
5.9 Comparison Between Experimental and Numerical		102

Chapter 6: Conclusions and Recommendations		121
6.1	Introduction	122
6.2	Conclusions	122
6.3	Recommendations	123
References		124
Appendix		135
	Appendix A	136
	Appendix B	138
	Appendix C	142
